

IT Excellence

For our clients we provide a full service IT project portfolio which comprises technical and organizational aspects

acp-IT guarantees high quality in IT project management and IT architecture in photovoltaic, semiconductor, automotive and other manufacturing domain know-how.

Project management, quality assurance & risk assessment

- Comprises project scope definition, ensuring stakeholder contribution as well as communication and reporting
- Elaboration of consistent work break down structures including characteristic KPIs to visualize a comprehensive project status overview at all times
- Continuous risk assessment and integrated mitigation management
- Implementing quality management and assurance procedures to go for zero defect production processes

IT architecture, requirements & business analysis

- Development and implementation of architecture guidelines enable reliable and maintainable system solutions
- Excellent domain know-how will ensure optimized requirements engineering and business process engineering
- Sustainable systems solutions via lean software development processes

Service portfolio in IT project management and IT design

We offer a comprehensive service portfolio to supply our clients in all technical and organizational aspects of IT projects from architecture to project management, from risk assessment to quality assurance.

The expertise of acp-IT within project management, business analysis and architecture will drive your production IT solution to be a step ahead.

Who we are

With our locations in Stuttgart, Dresden, Villach (Austria) and Timisoara (Romania) we offer professional IT products and services for planning and operation of high-tech manufacturing facilities.

What we do

High-specific skills in industrial engineering, shop floor control and IT know-how are applied to the demands of the semiconductor and photovoltaic market as well as in the field of optoelectronics and electronics.

FEATURES

Project management

- Project planning and controlling
- Change management

Quality & risk

- Risk assessment & management
- Quality assurance & management

IT architecture

- Architecture guidance, data modeling and design
- Software life-cycle processes, management and training

Requirements & business analysis

- Domain know-how
- Gap analysis and business process optimization

OUR SERVICES

- Leverage your creative potential and structure your knowledge for enhanced project performance
- Implementation of measurable project KPIs for executing solid milestone tracking (MTA)
- Reliable domain know-how in analyzing and optimizing your business processes
- IT consulting for software architectures, design, quality assurance and SEMI standardization
